

MIGUN of Greenville NEWSFLASH

Welcome to the MIGUN of Greenville Family!

February 2008 * Vol. 17

IN THE SPOT-LIGHT:
More Possibilities of
Infrared Therapy

MIGUN TECHNO-WORLD: Future Vision

Migun of Greenville is excited about the future of health in our community. Dr. Stephen Owens, former president of the American Chiropractic Association, stated in the summer of 2007 that when every home has a Migun bed, we will cut the cost of health care in the United States by 60%. We are thrilled to be able to offer the people of the Upstate such a cutting-edge opportunity to take charge of their health on a daily basis in their own home!

Migun Medical Instrument Company was founded in 1988, and the products were first introduced in the United States in 1998. Since that time, Migun has grown into an international community of health-conscious Migun-bed-owners who live in 42 countries all over the world! Here in the US, Migun is still relatively new, but the idea of doing something positive to help your health every single day is catching on.

"Having a Migun bed at home means that I take time for me, no matter what my day brings," says a happy bed owner from 29615. "I live near Migun, but there is nothing like a P5 before bed after all the responsibilities for the day are over."

Get creative with your Migun bed at home-this one disappears!

Migun's philosophy is that healthy individuals build healthier communities. To that end, Migun Medical Instrument Company, the manufacturers of our Migun beds, has been working for over a year on creating one of the finest technology centers in the world. Its name is Migun Techno-World and its home is Daeduk, Korea. Migun Techno-World is comprised of five stories in a 3-acre area containing offices, manufacturing facilities and even residential apartments.

The rooftop has an environmentally friendly sky garden, sports center, and other facilities (including, of course, Migun beds) for better health. The new facility opened on May 25, 2007, to the accolades of hundreds who will be living and working there. In the new

ALWAYS DRINK A LOT OF WATER after using the **MIGUN bed.** Hydration is critical after a massage!

OUCH! THE MIGUN BED HURT MY TAILBONE!

Did you say that to yourself after the jade probes made their first few passes under your lower back? Or on your way out of our center after your first treatment on the MIGUN bed? How about when you woke up the next morning?

After using MIGUN, did your tailbone area feel tender, inflamed, even bruised? If so, what you were experiencing was most likely a HEALING REACTION. A healing or improvement reaction is different from an injury. In fact, it is the opposite of an injury. Your body is actually trying to heal your lower back with the help of MIGUN.

SO, WHY DOES IT HURT? Most of us have problems with our lower backs, even if we don't know about the problems specifically. Some problems are obvious: herniated discs, fused vertebrae, curvature of the spine, misalignment of the spine, chronically tight muscles, spinal stenosis, arthritis, sciatica, etc. MIGUN of Greenville has seen it all.

Other conditions are less obvious but more common. The most common problem related to the lower back is calcification of the connective tissue along the spine. Healthy connective tissue is a lot like Saran Wrap: soft, pliable, smooth, yet strong. As we age, however, the connective tissue tends to harden up like cement, especially in the lower back. This can cause a whole host of health problems, so one of the best things you can do for your health is to soften up the connective tissue in your back. But, have you ever gotten a massage aimed at trying to break that stuff up? No.

As you age, your connective tissue loses some of its youthful flexibility— due to wear and tear, stress, less than perfect diet, injuries, etc.

MIGUN HAS GOOD NEWS!

Your tailbone will not always be sore after a treatment on the MIGUN bed. Calcification of the connective tissue can be reversed, and the MIGUN jade probes are uniquely suited for the task. The probes act like tiny gentle jackhammers in your lumbar and sacral area - very effective. First, the probes saturate your lower back with deeply penetrating far-infrared heat which dramatically increases blood flow, oxygen flow, and energy flow to the area. Then, the probes aggressively massage the connective tissue until the calcified material is broken down and flushed out of the body. This process usually takes about two weeks of daily MIGUN sessions. REMEMBER: Your problems did not appear overnight. Be patient and have faith in the process of healing. Come often to see what the MIGUN bed can do for you!

MIGUN EVENTS

Energizing Ionic Footbaths! \$35 for a half hour session—Saturday, February 16th and Monday, February 18th—all day long. Sign up for your foot bath today! Sign up is located in MIGUN's lobby.

Palmetto Clinic—Dr. Mike & Dr. Angela—will be doing FREE spinal screenings at MIGUN on Friday, February 8th. Screenings will begin around 1pm; no appointment is necessary.

Migun Techno-World: Future Vision (*cont'd*)

Migun Techno-World, people will share ideas, live their dreams, and grow with their company.

Migun trusts that this building will become the cornerstone for the Korean 'silicon valley'. It is this type of innovation and forward thinking that will compel Migun's development over the years to come.

3 GENERATIONS ENJOY SNOOZING ON THE HEALTHY MAT.... ONE HAS A FAST PASS!

Migun of Greenville is excited that Migun Korea uses creativity to help bring better health to the communities in which we live!

We are also continuously inspired by the feedback we receive from our happy Migun bed owners— better sleep, better attitude, better blood pressure... Migun is just **BETTER** at home!

SPOTLIGHT: More Possibilities of Infrared Therapy

As the research about all the great things infrared therapies do for the body continue to mount up, Migun of Greenville gets increasingly excited to offer such a valuable health enhancement and treatment product to our Upstate community.

In a recent news article (Infra Red Helmet For Reversing Early Alz-

heimer's To Be Tested, 28 Jan 2008, by Catharine Paddock), we learned that medical experts in the North-East of England, UK, have found that safe exposure to infra-red light improves learning and cognitive functioning in the brain, and they are going to test the method by getting Alzheimer's patients to wear an infra-red "helmet" for a short time every day.

The scientists believe the method can turn back the brain's biological clock and reverse some of the early stage damage typical of dementia and memory loss. The idea is that patients could use an infra red helmet for ten minutes a day in their own home and notice a significant improvement in the space of four weeks.

Scientists believe the methods can turn back the brain's biological clock

It is possible that the method not only halts but actually reverses the effects of dementia, said Dougal, who went so far as to suggest that one day the method might even be used to change the rate at which our bodies age.

Neuroscientists at the University of Sunderland, Drs Dr Abdel Ennaceur and Paul Chazot carried out the in-

dependent research that confirmed Dougal's findings. Chazot said:

"The treatment can indeed improve learning ability. The results are completely new this has never been looked at before. Dr Dougal's treatment might have some potential in improving learning in a human situation by delivering infra red through the thinnest parts of the

skull to get maximum access to the brain," he added.

Migun of Greenville is excited to offer new technology with such promising results to our community! Take home your Migun Thermal Massage System today and give yourself and your family the gift of beauty and health for life.
